

Reflection Studio 2.1

For my remix, I transformed Leonardo da Vinci's Mona Lisa into a luxury skincare advertisement called "Lumière Beauty". John Berger explains that artwork was once connected to a specific physical location, but technology now allows images to be reproduced and viewed anywhere. By placing the Mona Lisa into a modern advertisement, who controls the meaning of the image was changed. The original painting still has its historical meaning, but the digital remix gives it a new commercial meaning for a modern audience.

The typography and layout changes how the viewer sees the artwork. I added the words "Lumière Beauty", "Timeless Beauty", and "The Renaissance Collection", along with a gold frame and cream colored border. These additions help give her a more modern look and appears more like luxury beauty campaign than a Renaissance portrait.

The elegant fonts and gold design suggest wealth, beauty, and exclusivity, changing the viewer's attention from historical painting to more of a commercial message.

This project also showed me how closely art and technology are connected. Photography, digital editing, and AI allow artwork to be ~~re~~ reproduced and transformed in ways that weren't possible when the original was created. Moving the Mona Lisa from a ~~museum~~ museum setting onto a digital screen changes how we interact with it. My remix shows ~~technology~~ technology can preserve artwork while also giving it an entirely new context and meaning.
